

1. Go to the AWS Sign-Up Page: Visit the AWS Sign-Up page at <https://aws.amazon.com/>. Click on the "Create an AWS Account" button.
2. Provide Your Contact Information: You'll be asked to provide your email address and set a password for your AWS account. Make sure to use a valid email address as AWS will send a verification email.
3. Account Information: Fill out the requested account information, which includes your name, company name (if applicable), and contact information.
4. Payment Information: You'll need to enter your payment information, including a credit card number. AWS offers a free tier with limited resources for 12 months, but you must still provide payment information.
5. Identity Verification: AWS will verify your identity by sending a verification code to the email address you provided. Enter the code to proceed.
6. Select a Support Plan: You can choose between the Basic (free) or one of the paid support plans. If you're just getting started, you can select the Basic plan.
7. Choose Your AWS Account Type: You can select between a "Personal" and "Professional" account type. The primary difference is in the billing structure.
8. Review and Confirm: Review the information you've entered and the AWS Customer Agreement. If everything looks correct, check the box to agree to the terms and click "Create Account and Continue."
9. Complete the Contact Information: Provide additional contact information for AWS to reach you if necessary.
10. Select a Support Plan (Again): Reconfirm your support plan choice.
11. Set up IAM (Identity and Access Management) Users: After creating your AWS account, it's a best practice to set up IAM users with appropriate permissions. This enhances security and allows you to control who can access your AWS resources.
12. Start Using AWS: Once you've completed these steps, you'll be able to access the AWS Management Console and start using AWS services.
